OVERVIEW

Developer, designer, UX specialist, entrepreneur. I'm competent with a range of technologies, frameworks and platforms and have supported and lead teams both as an employee and a founder. I possess a strong understanding of current front-end/back-end development practices and am proficient in building user-centric applications that look and function beautifully across the stack. More than anything I'm obsessed with building amazing online products that people love and use.

If you value someone incredibly self motivated, excited to learn and grow every day and unstoppably driven towards success then I'd love to connect and explore how I could be an asset to your team.

EXPERIENCE

UX Prototyper – Google, Inc.

Boulder, CO | Feb 2014 – Current

Primary Job Duties: Leverage bleeding-edge frontend tools and methods to rapidly develop hi-fidelity prototypes. Work with designers, leads, PM's, Eng, and various other stakeholders to iterate quickly and vet ideas on next-gen Google applications. Contribute to internal libraries and frameworks to make it easier for designers to prototype @ Google.

UX Developer – Garmin International

Olathe, KS | June 2011 – June 2012 / January 2013 – Current

Primary Job Duties: Design & develop the user experience for Garmin web products/services. Interface prototyping, wireframing, and front-end coding.

Webmaster – Google, Inc.

Mountain View, CA | June 2012 – January 2013

Primary Job Duties: Research, architect, develop and support Google's wide range of static online content. Build next generation websites using advanced techniques that scale to support hundreds of millions of visitors every day. Lead and support many concurrent projects, each demanding the translation of highly complex requirements and timelines into stellar products. Plan, implement and manage I10n across a multitude of locales around the world.

Web Developer – Bernstein-Rein

Kansas City, MO | October 2010 – June 2011

Primary Job Duties: Develop internal/external web applications using cutting edge UI techniques and technologies. Develop backend logic to power large enterprise websites, while using design principles to build top notch frontend presentations. Transfer Photoshop layouts to standards compliant markup. Work through complex customer requirements.

Managed Services Consultant – Perceptive Software, Inc.

Shawnee, KS | May 2007 – October 2010

Primary Job Duties: Provide high quality technical assistance/service to current ImageNow customers during the upgrade, update, or database conversion process. Interact with and troubleshoot a variety of database platforms and operating systems ranging from Unix, Linux and Windows to SQL Server, Oracle and Ctree. Programming projects include multiple self designed/developed applications (in both C# and C++) to provide efficiency over current processes.

CEO – Chris Fay Consulting, LLC.

Mission, KS | May 2005 – Current

Primary Job Duties: CEO of Chris Fay Consulting, LLC, a company dedicated to providing value driven contemporary web solutions.
